

WEB HOSTING & CLOUD SERVICES

A stronger home for your website.

Hosting, cloud platforms, and ongoing care shaped around the experience your business needs to deliver.

THE FOUNDATION BEHIND YOUR WEBSITE

From a business website to a connected application, AperVue helps you choose the environment, plan the move, and keep the foundation maintainable.

CHOOSE THE FOUNDATION

The right environment starts with the workload.

We evaluate the website, application, traffic, data, and operational needs before choosing a hosting approach.

WEB HOSTING & SERVERS

IONOS

Web hosting, WordPress hosting, virtual servers, and cloud infrastructure. We can configure domains, site environments, migrations, and the operational setup that fits your project.

[Explore platform →](#)

AMAZON WEB SERVICES

AWS

A broad cloud environment for websites and custom applications. We can design application hosting, storage, delivery, and deployment workflows, including suitable Amplify Hosting projects.

[Explore platform →](#)

APPLICATIONS & CLOUD

Microsoft Azure

Cloud services for web applications, APIs, and connected business systems. We can plan Azure App Service environments and their identity, data, and operational connections.

[Explore platform →](#)

GOOGLE CLOUD PLATFORM (GCP)

Google Cloud

Cloud hosting for dynamic websites, applications, and data services. We can shape deployments around options such as Cloud Run, Compute Engine, and the needs of your software.

[Explore platform →](#)

Featured technologies are implementation options. Vendor partnership or certification is not implied.

CONTENT TOOLS THAT FIT YOUR TEAM

A place to publish. A platform to build on.

FLEXIBLE CONTENT MANAGEMENT

WordPress

Self-hosted WordPress

The open-source CMS runs on a compatible host. AperVue can manage setup, migrations, themes, plugins, and update workflows.

WordPress.com

A managed hosting service for WordPress. We help align the site and customization needs with the selected plan and supported features.

HOSTED WEBSITE PLATFORM

Squarespace

Website publishing and hosting in one platform. We can configure domains, build pages, organize commerce, and connect supported services.

[Explore platform →](#)

OPEN-SOURCE CMS

Joomla

A content management system installed on compatible hosting. We can help with setup, content structure, templates, extensions, and migration planning.

[Explore platform →](#)

CUSTOM CMS & APPLICATIONS

Build around the work you need to do.

We can also design a tailored CMS or portal and select the hosting, data services, and release process that fit it.

MORE TOOLS FROM THE APERVUE WEBSITE

Bring the application and its services together.

Modern websites often depend on more than a web server. We connect the services behind the experience.

WEB APPLICATION DELIVERY

Vercel

Application deployment, preview environments, and server functions. Useful for teams reviewing and releasing modern web experiences.

[Explore platform →](#)

APPLICATION HOSTING

Render

Web services, background services, and managed data options. A foundation for running the software behind a website or business application.

[Explore platform →](#)

EDGE DELIVERY & APPLICATIONS

Cloudflare

Domain routing, caching, delivery, and Workers-based applications. We can connect edge services and application logic to your environment.

[Explore platform →](#)

DATA, ACCOUNTS & STORAGE

Supabase

Postgres data, authentication, and file storage for connected applications. We design the data model, access rules, and service connections.

[Explore platform →](#)

GitHub

Code, review, automated checks, and documented release workflows connect development to your hosting environment.

WHAT APERVUE CAN DO

Built to launch. Prepared to be maintained.

01 Domains & secure connections

Configure domain records, TLS certificates, redirects, and the route from your web address to the right site.

02 Migration & cutover

Inventory the site and its dependencies, test the destination, and plan content transfer and DNS changes.

03 Performance & delivery

Review caching, assets, application behavior, and capacity to improve the visitor experience.

04 Updates & access

Plan platform and plugin updates, account permissions, and configuration changes with clear ownership.

05 Backup & recovery

Define backup coverage, retention, and restore steps appropriate to the selected services; test recovery.

06 Monitoring & support

Set up useful health checks and logs, define escalation paths, and document ongoing care responsibilities.

CONNECTIONS BEYOND HOSTING**EMAIL & COLLABORATION**

Microsoft Exchange • Microsoft SharePoint • Google Workspace

Mailbox, intranet, document, and team-workflow connections.

CUSTOMER INTERACTIONS

Resend • Twilio • Stripe

Application email, messaging, voice, and payment integrations.

CONNECTED EXPERIENCES

Mapbox • Expo

Location services and mobile applications connected to your backend.

A CLEAR PATH FORWARD

One plan for the move. Clear ownership afterward.

01

Discover the environment

Review the website, application, domain, data, integrations, and current access.

02

Design the approach

Select suitable services and define architecture, responsibilities, and recovery needs.

03

Build & validate

Configure the destination and test pages, forms, integrations, and content.

04

Coordinate the launch

Agree on a cutover window, validate domain routing, and prepare rollback steps.

05

Document & support

Hand over environment details, train the team, and define the ongoing care scope.

For growing businesses, membership organizations, professional services, and teams running websites or connected applications.

Let's plan your next step.
